Your Measure T dollars at work at a school campus near you

at the Stevenson Elementary School and District Office campus

Window installation is planned for May through July 2023. The work is a result of changes in state building codes for schools.

In areas near San Pierre Ave.: To minimize disruption to the school day, work will take place in the late afternoons and evenings during the school year and during business hours in the summer.

In areas near Montecito Ave.: Work will take place during business hours.

Additionally, **construction continues on a new storage shed** through June to allow proper storage of school items, increasing safety. The area, the south side of the tennis courts near the existing snack shack, is fenced off for safety.

In August, the **field gates will be locked during the school day** as part of a new perimeter controls system. The specific date will be posted on signage at the gates. The public will continue to have access to school fields in the evenings and on weekends through a system of automatic locking/unlocking gates. For student and staff safety, it's very important for our school to limit points of entry during school hours.

Construction has been scheduled to minimize disruptions for students, staff and neighbors. Thank you in advance for your patience.
