## Projects starting this summer

### Gates and Locks

Last year, new fencing and gates were added in order to completely enclose campus and to match existing fencing. This summer, pending the availability of materials, a lock management system will be added to the gates. With the installation of the automatic locking/unlocking gates, the public will continue to have access to fields in the evenings and on weekends. The purpose of the perimeter controls is to secure campuses during school hours when students are present. Additionally, this winter, staff members will be able to access classrooms and offices using key cards, instead of keys.

### Tenting

The library building will be tented and a pesticide applied to treat the structure for termites.

### Portables and Blacktop

The school's blacktop areas will be off-limits for 30 days. All brown portables installed during past construction will be removed.

Due to wear and tear exposing unsafe cracks, the existing blacktop playground will be resurfaced and striped. The asphalt between classroom wings will be resealed.

### Lighting

New lights and/or bollard style light posts will be installed to illuminate pedestrians' path of travel between campus and parking lots. The light locations were determined by photometric survey data. This additional lighting is an important safety measure for staff members and guests using the campus in the evenings and winter late afternoons.

### New Classroom Construction

One, new 960-sf classroom portable will be installed on a permanent concrete foundation, including sitework and landscaping. It will be located just to the south of portable kinder room #20. It will have the standard classroom finish; whiteboard wall, sink and audio-visual system.

### Security Cameras

Security cameras in public areas will be installed at all school sites as a way to increase safety for students and staff members by deterring misconduct and preventing vandalism. Members of the schools' communities were engaged in a series of feedback meetings in Winter 2022.

### Public Restroom

A prefabricated, standalone toilet building will be installed on the southwest corner of the field between the MUR and baseball diamond. The unit will be maintained by the City and may be used after school hours by the public; not by students during the school day. This is an important security measure to ensure adults are not mixing with children in student restrooms. The restroom's design and placement were determined through a community input process held in Spring 2021.

### HVAC

Pending availability of materials, HVAC will be replaced in the Library this fall/winter. The existing HVAC system has already been updated to include MERV-13 filters.
