Your Measure T dollars at work at Castro & Mistral Schools

Projects starting this Summer

Security cameras in public areas

Security cameras in public areas will be installed at all school sites as a way to increase safety for students and staff members by deterring misconduct and preventing vandalism. Members of the schools' communities were engaged in a series of feedback meetings in Winter 2022.

Lighting

New lights and/or bollard style light posts will be installed to illuminate pedestrians' path of travel between campus and parking lots. The light locations were determined by photometric survey data. This additional lighting is an important safety measure for staff members and guests using the campus in the evenings and winter late afternoons.

Gates and locks

Last year, new fencing and gates were added in order to completely enclose campus and to match existing fencing as an important student safety measure. This summer, pending materials availability, a lock management system will be added to the gates. With the installation of the automatic locking/unlocking gates, the public will continue to have access to fields in the evenings and on weekends. The purpose of the perimeter controls is to secure campuses during school hours when students are present. Additionally, this winter, staff members will be able to access classrooms and offices using key cards, instead of keys.

Public Restroom

A prefabricated, standalone toilet building will be installed on the southeast corner of the field near the Latham Street tot lot. The unit will be maintained by the City and may be used after school hours by the public; not by students during the school day. This is an important security measure to ensure adults are not mixing with children in student restrooms. The restroom's design and placement were determined through a community input process held in Spring 2021.
